Do my homework

Do my Homework

Computers are all "more powerful" and "stronger", as advertising says about them.
To navigate in this "power", a quantization of accounting (KU) computing power is proposed.
The description of the ku - program hours on the computer.
The more the hours it works, the more "computing power".
The program is prepared in Forth and is available to everyone to explore and modify.
Ignore reviews and criticism of the method of assessing "computing power"
Without alternative proposals with specific text examples
or source code codes.
